

HORTAU
SIMPLIFIED IRRIGATION®

"If we didn't have this tool to work with, we'd be two or three days late every time. You add that up over the growing season and you've missed two or three irrigations"

—**Carson Kalin of Kalin Farms in Brawley, Calif.**

On growing onions and monitoring crop health with Hortau precision irrigation management.

Timely data key to irrigation management

In irrigation management, timing is everything. Why rely on data from yesterday, last week or last month to make important irrigation decisions about your crop today?

Data from other technologies such as aerial imaging or pressure bombs are only as current as the last flight or time-consuming manual reading, meaning crop health could already be at risk.

With Hortau's suite of real-time field sensors and cloud-based software, growers are able to remain proactive and anticipate crop stress, irrigating to a plant's need to ensure optimized crop health and production.

"It's a water saving device, and more importantly, because the plant gets water at the correct time, it increases yields."

—Al Kalin, Kalin Farms in Brawley, Calif.

To learn more about monitoring the health of your crop in real time with Hortau, contact your local sales representative or call us directly at **(805) 545-5994**.

Hortau System Benefits:

- ➔ Accurate, real-time data
- ➔ Easy to follow information via software and mobile app
- ➔ Best-in-class service, support and training
- ➔ Full coverage of operation.
